Company Introduction

"SINCE 2011" | Glorious Journey of 13 Years

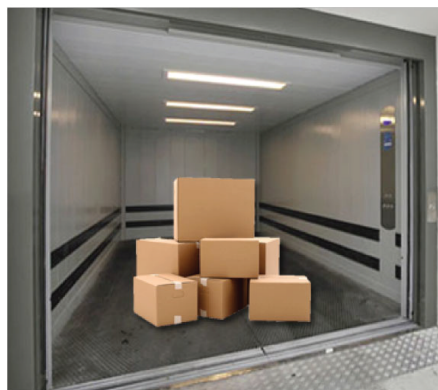

Sky7 Corporation BD is committed to run all its operations absolutely professionally by ensuring prompt and proper services to its clients, be it for a new supply and installation or for maintenance of lifts or modernization of old lifts. To its credit owing to clients' confidence on its ability to maintain lifts of different makes and origin, the company as of 2011 is providing

maintenance services of different makes and origins.

Since, the lift maintenance business warrants skilled manpower as well as prompts and timely human intervention whenever there is a lift call SKY7, from its very inception has set up its maintenance division accordingly. It has recruited skilled Engineers and Technicians with adequate experience and exposure in the field level to look after the preventive maintenance and call attending. SKY7 keeps adequate stock of spares to minimize lift downtime. Presently, for a Traction lift, frequency of preventive maintenance is once every month, which has become a norm worldwide. SKY7 Troubleshooting division is on alert 7 days a week and each and every call is being attended immediately after receiving that call.

The Company has set all its operational divisions as per their principal motto- "Overall Professional Approach" and has recruited professionals with thorough experience and exposures from the field. We at SKY7 Family, firmly believe that success in this business depends on quality equipment, quality installation and quality maintenance; it was easy for us to motivate ourselves to go for overall quality-in equipment we supply, in installation we do and in the services we provide; all these of course, maintaining the stipulated timeframe.

SURAPID ELEVATOR CO., LTD.

A XIZI UHC COMPANY

(China Top 500 Enterprise)

www.surapid.net

www.facebook.com/SurapidElevator

SURAPID Elevator Co., Ltd. is a wholly-owned subsidiary of New Xi'ao Elevator Group specializing in complete elevator and escalator solutions.

New Xi'ao Elevator Group is listed as one of the Top 500 Chinese Enterprises, the #1 integrated elevator group in China, the largest elevator & escalator component supplier in China. In 1997, New Xi'ao Elevator Group and OTIS established a famous joint venture elevator company in Hangzhou, China, known as XIZI OTIS.

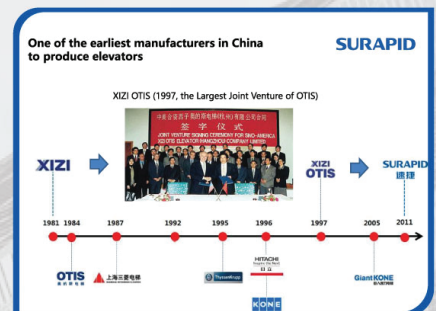

Traction machines, control systems, door operators, safety parts are all produced by ourselves, thus ensuring the quality and stability of our elevators and escalators.

Our headquarters is located in the Hangzhou Lin'an industry development zone, covering an area of 200,000 SQMs, combined by Zhejiang University Research Institute, Elevator R&D center, 208m test tower, 50,000m2 manufacturing area, etc.

First-Class Quality

We have set foot in the industry for nearly 38 years, has solid scientific research and innovation strength. Now it possesses more than 300 technical personnel, 60 patent projects, undertakes 20 key research and development projects and launches 3 or 4 new products averagely per year. In the meantime, the company corporately set up the Research Institute of Zhejiang University with Zhejiang University. Cooperating extensively with famous universities such as Tsinghua University and Shanghai Jiaotong University, we have established its R&D center, production & manufacture center, three platforms of quality inspection center in the course of pursuing a specialization of products, modernization of manufacturing and enlargement of the enterprise. Adhering to the concept of "Advances with the Times, Continuous Innovation", the company is always keeping the strong competitiveness.

SURAPID

► Traction machine

Note: the pictures are for reference only, and follow the elevator configuration

SURAPID is a hi-tech enterprise with independent R&D ability and we have our own factory and brand

ENERGY SAVING AND ENVIRONMENTAL PROTECTION

Feel the efficient and stable operation of the elevator with a green vision, and enjoy a spiritual journey of space.

► Energy saving traction machine

• Environmental protection

The permanent magnetic synchronous gearless traction machine adopts an outer rotor structure, a permanently sealed bearing with low noise, no need to replace grease, and no oil pollution. And no maintenance is required, saving maintenance costs for users.

• Stable, reliable

The permanent magnetic synchronous motor adopts high temperature resistant rare earth materials, and is equipped with a motor overheating protection device to ensure that the motor will never demagnetize; the double stack brake is sensitive and has a large braking force to ensure the safety of passengers.

• Space-saving

The permanent magnetic synchronous gearless traction machine is small in size and compact in structure, which can fully meet the design of small machine room elevators, thereby effectively saving building space.

• Energy efficient

Compared with the geared mainframe, the reduction box is eliminated, the mechanical energy consumption, noise and vibration caused by this are eliminated, and the transmission efficiency is greatly improved. Compared with the traditional geared mainframe, the average energy saving can reach 30%.

COMFORTABLE ENJOYMENT

Let every encounter be a mark of every time, and make comfort a different experience for you.

► Control System

Independent R&D, with our own factory and brand

More efficient

With dual 32-bit CPU, the control and drive are closely coordinated to make the elevator run more efficiently.

More value

U-Con system integration is higher than that of ordinary systems, reducing the volume of the control cabinet and improving the utilization rate of the building.

Easier to maintain

The system function software is installed in a modular design, and the functions are clearly defined, which is convenient for debugging and maintenance.

► G3 exclusive steel belt

G3 adopts the latest imported composite steel belt to replace ordinary steel rope. Let passengers enjoy the comfortable ride experience.

More secure

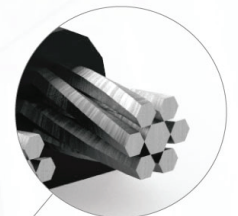

The safety performance of the composite steel belt is much higher than that of the steel rope, and each steel belt can withstand up to 40KN tension. And passed more than a dozen rigorous performance tests.

More durable

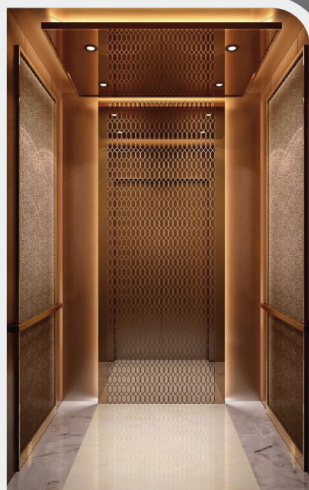

The life of composite steel bars is 2 to 3 times longer than that of traditional steel ropes.

More comfortable

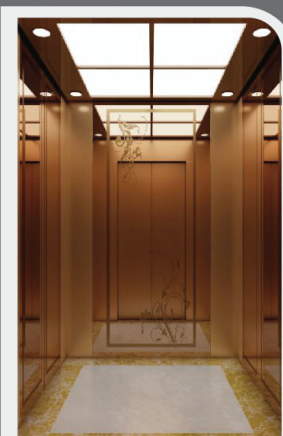

The flexibility of composite steel bars is much greater than that of steel wire ropes, so it greatly reduces vibration during operation. The vibration generated during the trip creates a quiet and comfortable ladder environment for users.

SURAPID

AKSEN
ELEVATOR

ESCALATOR

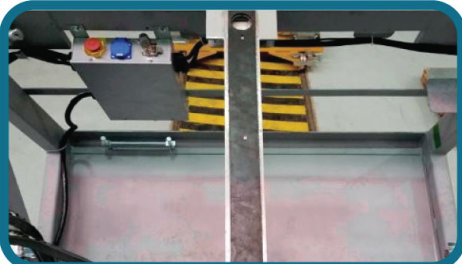

INTELLIGENT MICROCOMPUTER CONTROL SYSTEM

The control system is fully functional with a fully upgraded 32-bit microprocessor. Relying on extraordinary and flexible design ideas, we have strong attainments in logic processing. With precise control, outstanding accomplishments and extraordinary reliability. Comprehensive security function protection (security)

FLEXIBLE LARGE FRICTION WHEEL HANDRAIL DRIVE

The friction wrap angle reaches 140-160 degrees; the handrail belt has smooth walking curve and is durable in use. High parallelism, and not affected by elastic deformation of truss.

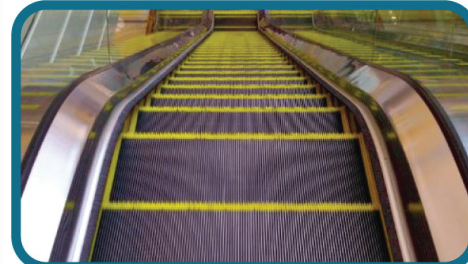

ANTI-OVERTURNING DEVICE FOR FLOOR SLAB

The floor boards of the fast-moving escalators are all equipped with cross beams, which make the cover plates firmer, longer in life and safer, and prevent the occurrence of "cannibalism" of elevators.

NOVEL ALUMINUM ALLOY HANDRAIL ENTRANCE WITH SPACE CURVED SURFACE

The unique external cover plate support frame developed independently ensures the smoothness and firmness of the external cover plate connection, and is extremely convenient to be adjusted and disassembled.

THE RELIABILITY OF THE STEP

20 million dynamic load tests were carried out on the steps, and far exceeding the national standard requirements (5 million dynamic load tests required by the national standard), to ensure the steps are still carried out effectively and smoothly under the severe use environment. The step frame adopts the national standard or higher fire rating to effectively improve the safety of elevator riding.

TECHNOLOGICAL FEATURES

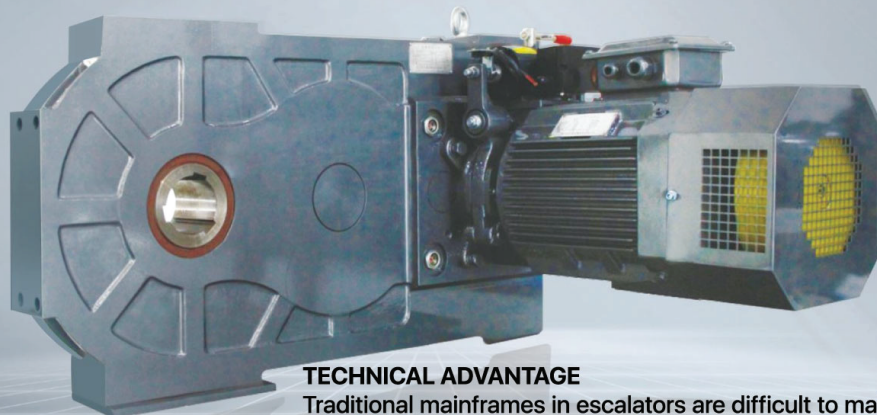

Thin model : saves space and facilitates multi-stage drive lay out.

Direct drive : saves chain drive and is safer and more efficient.

Direct drive : saves chain drive and is safer and more efficient.

Patented product : several patents have been applied for.

Output straight line cascade step drive mainframe is more compact. Suitable for conventional truss structure space

TECHNICAL ADVANTAGE

Traditional mainframes in escalators are difficult to maintain and easy to be broken due to chain gear drive and other safety risks. The new direct drive gear drive escalator main machine has the advantages of safety, high efficiency, long service life, simple maintenance and the like.
